Volume 12680

Proceedings of SPIE 0277-786X, V. 12680

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Techniques and Instrumentation for Detection of Exoplanets XI, edited by
Garreth J. Ruane, Proc. of SPIE Vol. 12680, 126802P · © 2023 SPIE
0277-786X · doi: 10.1117/12.3015305

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Techniques and Instrumentation for Detection of Exoplanets XI*, edited by Garreth J. Ruane, Proc. of SPIE 12680, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix *Conference Committee*

GROUND-BASED INSTRUMENTS AND RESULTS I

12680 01 **Upgrading the Gemini planet imager to GPI 2.0 (Invited Paper)** [12680-1]

12680 02 **Gemini planet imager 2.0: implementing a Zernike wavefront sensor for non-common path aberrations measurement** [12680-2]

12680 03 **The slicer combined with array of lenslets for exoplanet spectroscopy (SCALES): driving science cases and expected outcomes** [12680-4]

12680 06 **Characterization of hot Jupiter atmospheres with Keck/KPIC** [12680-7]

12680 07 **The development of HISPEC for Keck and MODHIS for TMT: science cases and predicted sensitivities** [12680-8]

ADAPTIVE OPTICS METHODS

12680 0B **A non-linear curvature wavefront sensor for the Subaru telescope's AO3k system** [12680-12]

12680 0C **Strategies and considerations for the on-sky implementation of the controllable segmented primary mirror with AO WFS feedback** [12680-13]

12680 0D **Development of the coherent differential imaging on speckle area nulling (CDI-SAN) method** [12680-14]

12680 0E **Tempestas ex machina: a review of machine learning methods for wavefront control** [12680-15]

HIGH-ALTITUDE BALLOON MISSIONS

12680 0F **The PICTURE-C exoplanetary imaging balloon mission: second flight results and the transition to a new mission, PICTURE-D** [12680-16]

PHOTONICS

12680 0G **The path to detecting extraterrestrial life with astrophotonics (Invited Paper)** [12680-17]

12680 0H **Photonic spectro-interferometry with SCExAO/FIRST at the Subaru Telescope: towards Ha imaging of protoplanets** [12680-18]

12680 0I **Laboratory characterization of a mode-selective photonic lantern for exoplanet characterization** [12680-19]

12680 0J **Spectro-astrometry of embedded accreting protoplanets using photonic lanterns** [12680-20]

12680 0K **Exploring the potential of coherent imaging using photonic lanterns with beam combiners** [12680-21]

INTERFEROMETRY TECHNIQUES

12680 0M **First light of the vortex fiber nulling mode on the Keck planet imager and characterizer** [12680-23]

12680 0N **Exploring calibration algorithms to maximize the null depth in KPIC's vortex fiber nulling mode** [12680-24]

12680 0O **Image reconstruction for kernel phase interferometry with SCExAO/CHARIS using gradient descent** [12680-25]

METASURFACES

12680 0P **Prospects for metasurfaces in exoplanet direct imaging systems: from principles to design** [12680-26]

12680 0Q **Metasurface-based scalar vortex phase mask in pursuit of 1e-10 contrast** [12680-27]

POLARIZATION ABERRATIONS

12680 0R **Estimation of polarization aberrations and their effect on the coronagraphic performance for future space telescopes** [12680-28]

12680 0S **Characterizing the instrumental polarization of SCExAO VAMPIRES** [12680-29]

ROMAN CORONAGRAPH I

12680 0T **Nancy Grace Roman Space Telescope coronagraph instrument overview and status (Invited Paper)** [12680-30]

12680 0V **FALCO simulations of high-contrast polarimetry with the Nancy Grace Roman Space Telescope coronagraph instrument** [12680-32]

ROMAN CORONAGRAPH II

12680 0Y **Multi-star wavefront control at the occulting mask coronagraph testbed: monochromatic laboratory demonstration for the Roman Coronagraph instrument** [12680-35]

12680 0Z **Simulating the efficacy of the implicit-electric-field-conjugation algorithm for the Roman Coronagraph with noise** [12680-36]

STARSHADES

12680 10 **A starshade for NASA's habitable worlds observatory concept: exoplanet characterization in the UV** [12680-37]

12680 11 **Particulate contamination on starshade optical edges** [12680-38]

DEFORMABLE MIRRORS

12680 12 **Development of a multiplex application specific integrated circuit driver for deformable mirrors** [12680-39]

12680 13 **First generation parabolic deformable mirror for the ExoSpec project** [12680-40]

FOCAL PLANE WAVEFRONT SENSING AND CONTROL

12680 14 **Focal plane wavefront control for the Gemini Planet Imager 2.0 calibration system (CAL2)** [12680-41]

12680 15 **Experimental comparison of model-free and model-based dark hole algorithms for future space telescopes** [12680-42]

CORONAGRAPH TESTBEDS AND RESULTS I

12680 17 **The decadal survey testbed two: a technology development facility for future exo-Earth observatories** [12680-44]

12680 18 **Dual purpose lyot coronagraph masks for simultaneous high-contrast imaging and high-resolution wavefront sensing** [12680-45]

12680 19 **Demonstration of coronagraph technology for high-contrast point spectroscopy of ExoEarths** [12680-46]

12680 1A **Microfabricated pinholes for high contrast imaging testbeds** [12680-47]

12680 1B **High contrast spectroscopy testbed (HCST): experimental results with an apodized vortex coronagraph** [12680-48]

12680 1C **Broadband wavefront control with a single mode fiber: 1E-8 raw contrast over 20% bandwidth** [12680-49]

12680 1E **High-contrast Jacobian-free wavefront control: simulations, experimental results, and extensions to adaptive control** [12680-51]

CORONAGRAPH TESTBEDS AND RESULTS II

12680 1G **Experimental demonstration of spectral linear dark field control at NASA's high contrast imaging testbeds** [12680-53]

FUTURE SPACE MISSIONS

12680 1K **Quantifying the impacts of schedulability on science yield of exoplanet imaging missions** [12680-57]

12680 1L **Exo-Earth yield of a 6m space telescope in the near-infrared** [12680-58]

12680 1M **Integrated active control of coronagraph and telescope for high contrast imaging** [12680-59]

12680 1N **Evaluating embedded hardware for high-order wavefront sensing and control** [12680-60]

POSTER SESSION

12680 1P **Deformable mirror-based pupil chopping for exoplanet imaging and adaptive optics** [12680-62]

12680 1Q **First laboratory demonstration of real-time multi-wavefront sensor adaptive optics** [12680-63]

12680 1R **The telescope simulator for the Fraunhofer telescope Wendelstein** [12680-64]

12680 1S **Integrated photonic-based coronagraphic systems for future space telescopes** [12680-65]

12680 1U **Visible extreme adaptive optics on extremely large telescopes: towards detecting oxygen in Proxima Centauri b and analogs** [12680-67]

12680 1V **SHIMM as an atmospheric profiler on the Nickel telescope** [12680-68]

12680 1W **Designing custom medium resolution observing modes to trace planet accretion with SCALES** [12680-69]

12680 1X **Flexible exoplanet observation simulations with psisim** [12680-70]

12680 1Y **Testing and performance of IFS upgrades for GPI 2.0** [12680-71]

12680 20 **Characterization of diamond-turned optics for SCALES** [12680-73]

12680 21 **NMF-based GPU accelerated coronagraphy pipeline** [12680-74]

12680 22 **Optics testing for SCALES** [12680-75]

12680 23 **Simulating medium-spectral-resolution exoplanet characterization with SCALES angular/reference differential imaging** [12680-76]

12680 24 **Recovering simulated planet and disk signals using SCALES aperture masking** [12680-77]

POSTER SESSION

12680 26 **Testbed multi-star wavefront control experiment modeling analysis** [12680-80]

12680 27 **Roman coronagraph HOWFSC modeling: case study and raw contrast performance prediction** [12680-81]

12680 28 **Exoplanet detection from starshade images using convolutional neural networks** [12680-82]

12680 29 **BLOCT: the bifurcated light optical coronagraphic telescope** [12680-83]

12680 2A **Advances in the control of Si substrates with magnetic smart materials to provide low-power surface control on the sub-nanometer level for space deformable mirrors** [12680-84]

12680 2B **Achromatizing scalar vortex coronagraphs with radial phase mask dimples** [12680-85]

12680 2C **Laboratory demonstration of the triple-grating vector vortex coronagraph** [12680-86]

12680 2D **Implicit electric field conjugation for improved starlight rejection through a single-mode fiber** [12680-87]

12680 2E **Reflective lyot stop low-order wavefront control for future large space telescope coronagraphs** [12680-88]

12680 2F **Coralign: a software package for coronagraphic alignment and calibration** [12680-89]

12680 2G **Coronagraph design survey for future exoplanet direct imaging space missions: interim update** [12680-90]

12680 2H **Differential optical transfer function wavefront sensing and pupil calibration with the HiCAT testbed** [12680-91]

12680 2J **Integrated coronagraphy and wavefront sensing with the PIAACMC** [12680-93]

12680 2K **The diffractive interfero coronagraph exoplanet resolver (DICER)** [12680-94]

12680 2L **The dispersion leverage coronagraph (DLC): an achromatic nulling coronagraph for use on primary objective grating telescopes** [12680-95]

12680 2M **A new method for the discovery of the distant exoplanets** [12680-96]

12680 2N **Antireflection coatings on starshade light-blocking membranes for straylight suppression** [12680-97]

12680 2O **The PRIME project large format near infrared camera for the microlensing events survey** [12680-98]

Conference Committee

Program Track Chair

Oswald H. Siegmund, Space Sciences Laboratory (United States)

Conference Chair

Garreth J. Ruane, Jet Propulsion Laboratory (United States)

Conference Program Committee

Tyler D. Groff, NASA Goddard Space Flight Center (United States)
Olivier Guyon, Subaru Telescope, National Astronomical Observatory of Japan (United States), Research Corporation of University of Hawaii (United States), and The University of Arizona (United States)
Quinn M. Konopacky, University of California, San Diego (United States)
Maxwell A. Millar-Blanchaer, University of California, Santa Barbara (United States)
Stephanie Sallum, University of California, Irvine (United States)
Stuart B. Shaklan, Jet Propulsion Laboratory (United States)
Rémi Soummer, Space Telescope Science Institute (United States)
